WORK HEALTH AND SAFETY

2020

Ensuring and promoting Health and Safety of all those who work with us is part of our daily routine.

Work Health and Safety Management in AC

We contribute to the welfare of present generations and to the progress of future generations, striving every day to work more safely, creating economic and social value and improving the health of the working population related to Auxiliar Conservera, in the short and long term.

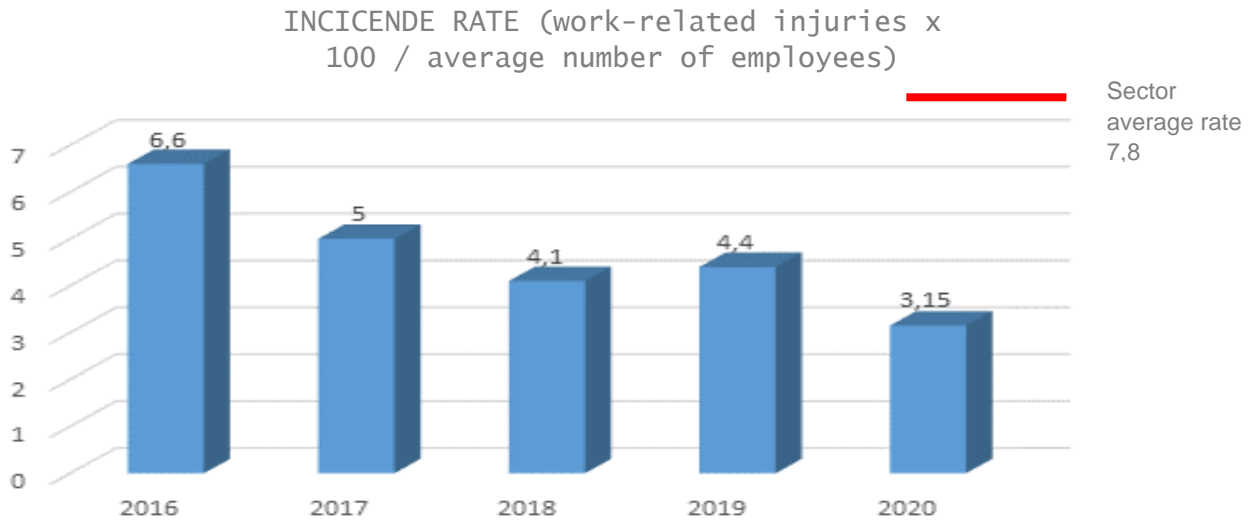

Because the concern for Work Health and Safety influences and determines business decision-making processes more and more every day. Thus, we evaluate the situation of the Company, its strengths and weaknesses, we analyse the Health and Safety management system, we identify the aspects that may affect health, safety and welfare and we develop procedures to achieve our objectives: protecting ourselves and taking care of the health and welfare of people **with more emphasis**.

We take a step beyond legal obligations, and in accordance with the Company's strategy of prioritizing Health and Safety at work, we increase the investment of economic and human capital and promote relations with interlocutors. We integrate the concept of Health and Safety into our decision-making, because we know that by investing in safe and healthy technologies and business practices, we contribute to create a framework where economic growth and competitiveness are fostered, while guaranteeing the protection of people, valuing the social impact of business activity.

And to take that step towards the total integration of Health and Safety in the Organization, we have incorporated management systems that promote a Continuous Improvement and Activity Planning, establishing Health and Safety objectives, which have led us to a process of differentiation and distinction.

Incidence rate.

Our accident incidence rate shows a decreasing trend over the last few years, and in 2020 we have had an incidence rate considerably lower than the sector average. Even so, our goal is, as it cannot be otherwise, that of 0 accidents.

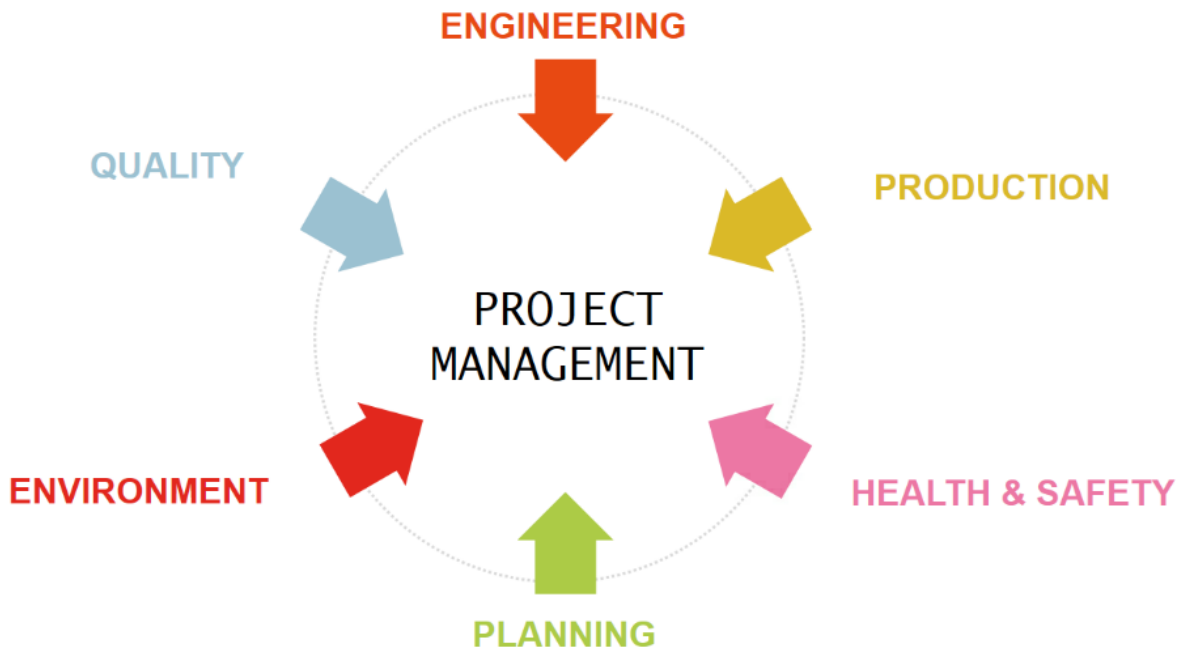

Strategy

And to achieve this aim, we have a Health and Safety strategy, based on the following principles:

One of the main **principles** is the integration of Health and Safety in the management of all the Company's projects, which helps us to include safety in all the tasks related to each project. Thanks to this, we have reduced the number of incidents detected in the reviews of contracts and / or unusual work in our processes. **On the other hand**, it also makes us more efficient as an Organization and more coherent, as there is a single and complete vision of Health and Safety issues.

We live with risks in our processes so we must make use of personal protective equipment (PPE).

Máquina expendedora nave PR2 Centro Torrealta

PPE that we make available through vending machines, which have allowed: reducing distances between the place of acquisition of PPE and the worker; improving accessibility, now 24/7; providing better information on the requested PPE.

An ultimate objective that responds to the Company's commitment to the Sustainable Development Goals promoted by the United Nations. Strategies and objectives shared by all the staff of Auxiliar Conservera.
